

SUPERPRO_{COMBI}

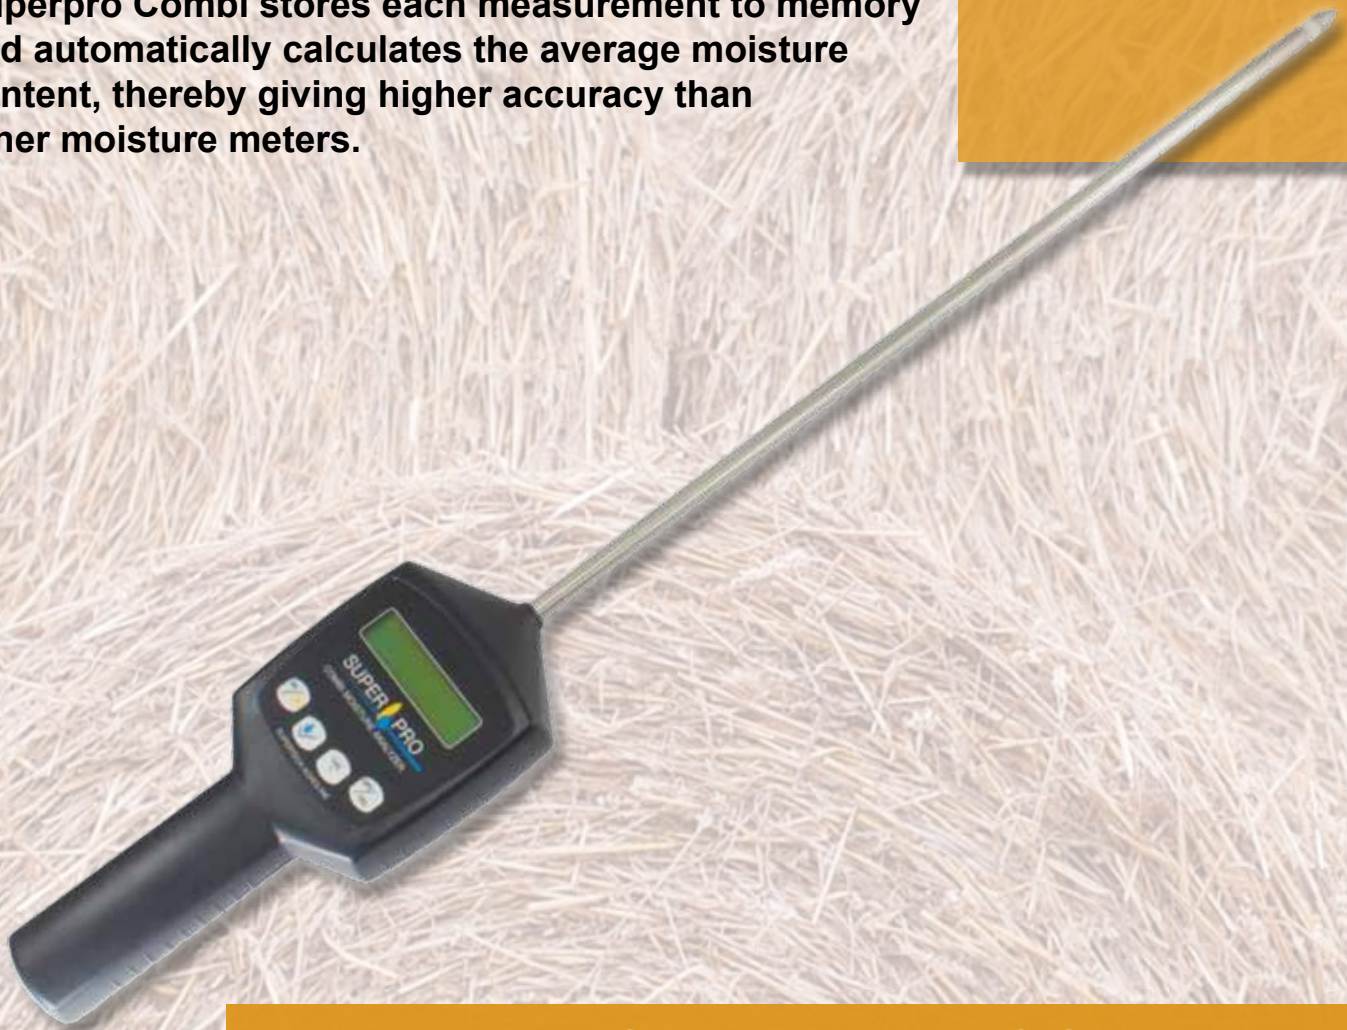

MOISTURE
ANALYSERS

Superpro Combi is a new generation of reliable moisture meters for hay, straw and silage. Superpro Combi enables you to read actual moisture in the bale, average the moisture content, display the number of stored measurements and read bale temperature.

A reliable measurement requires multiple readings in the bale due to density variation.

Superpro Combi stores each measurement to memory and automatically calculates the average moisture content, thereby giving higher accuracy than other moisture meters.

MOISTURE ANALYSERS

FOR HAY STRAW AND SILAGE

SUPERPRO COMBI

Digital read out with accuracy to one decimal point giving:

- Actual moisture content
- Number of stored measurements
- Temperature
- Average moisture content

50 cm stainless steel probe with moisture and temperature sensor

Press to:

- Turn on analyser
- Switch on display backlight

Press to:

- To store measurements to memory
- Automatically calculate average moisture content

Press to:

- Turn off analyser
- Clear memory of stored measurements

Press to:

- Adjust calibration to compensate for bale density variation.

TECHNICAL SPECIFICATIONS

- Measuring range (Moisture): 8.5 to 80%
- Operating range (Temp.): -5 to 70 °C
- Resolution: 0.1% moisture
- Probe: 50 cm stainless steel

- Battery: 9 V Alkaline
- Display: 2 line LCD with backlight
- Accuracy: Better than +/- 1.5% In normal moisture range when using average and calibration adjustments
